Patent No. 6521749
GENERAL INFORMATION:
APPLICANT: Vincent Ling
APPLICANT: Vincent Ling
TITLE OF INVENTION: NOVEL GLSO MOLECULES AND USES THEREFOR
FILE REFREENCE: GNN-007
FULE REFREENCE: GNN-007
CURRENT APPLICATION WUMBER: US/09/667,135
CURRENT FILLING DATE: 2000-09-21
NUMBER OF SEQ ID NOS: 38
             APPLICANT: David A. Hafler
TITLE OF INVENTION: PEPTIDES DERIVED FROM IMMUNODOMINANT
TITLE OF INVENTION: EPITOPES OF MYELIN BASIC PROTEIN
FILE REPERENCE: 1010/05/33US3
CURRENT APPLICATION NUMBER: US/08/297,395A
CURRENT FILING DATE: 1994-08-11

Patent No. 6468791
GENERAL INFORMATION:
CENERAL INFORMATION:
Masco, Wilma
Levy-Lahad, Ephrat
Bird, Thomas D.
Galas, David J.
TITLE OF INVENTION: CHROMOSOME I GENE AND GENE PRODUCTS RELATED TO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 21, Application PC/TUS9609009
GENERAL INFORMATION:
APPLICANT: Buchberg, Arthur M.
APPLICANT: Bracherg, Linda D.
APPLICANT: Chepenik, Kenneth P.
TITLE OF INVENTION: RISK PACTOR FOR COLORECTAL CANCER
TITLE OF INVENTION: AND
TITLE OF INVENTION: COMPOSITIONS AND METHODS OF DETECTING THE SAME NUMBER OF SEQUENCES: 22
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                               ..

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
Sequence 5, Application US/08587670A
Patent No. 5824535
GENERAL INFORMATION:
APPLICANT: Kou, Gang-Hsiung
APPLICANT: Mang, Chung-Hsiung
APPLICANT: Lo. Chu-Fang
TITLE OF INVENTION: IDENTIFICATION, PUBLFICATION AND
TITLE OF INVENTION: DETECTION OF WSBV (BACULOVIRUS ASSOCIATED WITH
TITLE OF INVENTION: WHITE SPOT SYNDROME)
NUMBER OF SEQUENCES: 14
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 5, Application US/09061674

Sequence 47, Application US/09440523

Patent No. 6268148

GENERAL INFORMATION:
APPLICANT: Barany, Francis
APPLICANT: Lubin, Matthew
TITLE OF INVENTION: COUPLED LIGASE DETECTION AND POLYMBRASE CHAIN REACTIONS
FILE REFERENCE: 19603/441

CURRENT APPLICATION NUMBER: US/09/440,523

CURRENT FILING DATE: 1999-11-15
                                                                                                                                                                                                                                                                                                                                                                                                                           ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 47, Application US/08864473
Sequence 47, Application US/08864473
Patent No. 6027889
GREEL INFORMATION:
PAPELICANT: Barany, Francis
APPLICANT: Barany, Francis
APPLICANT: BARANY FRANCIS
APPLICANT: COUPLED LIGASE DETECTION OF NUCLEIC ACID SEQUENCE DIFFERENCES USING
TITLE OF INVENTION: COUPLED LIGASE DETECTION AND POLYMERASE CHAIN REACTIONS
FILE REFERENCE: 19603/441
CURRENT APPLICATION NUMBER: US/08/864,473
CURRENT FILING DATE: 1997-05-28
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       US-09-431-705-52
US-09-431-705-52
Patent No. 658595
Patent No. 658595
GENERAL INFORMATION:
APPLICANT: Kleanthous, Harold
APPLICANT: Freeman, Donna
TITLE OF INVENTION: Use of salmonella vectors for
TITLE OF INVENTION: vscination against helicobacter infection
FILE REFERENCE: 06122/060001
CURRENT APPLICATION NUMBER: US/09/431,705
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               DB 1; Length 19;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           DB 1; Length 20;
Sequence 15, Application US/09318191A

Patent No. 6057156
GENERAL INFORMATION:
APPLICANT: Akhtar, Saghir
APPLICANT: Rell, Patricia
APPLICANT: McSwiggen, James
TITLE OF INVENTION: BYZYMATIC NUCLEIC ACID TREATMENT
TITLE OF INVENTION: OF DISEASES OR CONDITIONS RELATED
TITLE OF INVENTION: TO LEVELS OF EPIDERMAL GROWTH
TITLE OF INVENTION: FACTOR RECEPTORS
                                                 Gequence 37, Application US/08887798
Factor No. 592256
GENERAL No. 192256
FAPPLICANT: Mayeux, Richard
FAPPLICANT: Graziano, Joseph H.
APPLICANT: Freyer, Greg
TITLE OF INVENTION: PRAKINSON'S DISEASE TESTS
TITLE OF INVENTION: PARKINSON'S DISEASE TESTS
CORRESPONDENCE: 38

Patent No. 6057156
Patent Akhtar, Saghir
APPLICANT: Pell, Patricida
APPLICANT: McSwiggen, James
TITLE OF INVENTION: ENZYMATIC NUCLEIC ACID TREATMENT
TITLE OF INVENTION: TO LIGHES OF EPIDERMAL GROWTH
TITLE OF INVENTION: FACTOR RECEPTORS
                                                                                                                                                                                                                                                                                                                                                                                                  APPLICANT: Akhtar, Saghir.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        US-08-320-559-15/c
US-08-320-559-15/c
Sequence 15, Application US/08320559
Patent No. 5633135
GENERAL INFORMATION:
APPLICANT: Croce, Carlo
APPLICANT: Cranani. Bli
TITLE OF INVENTION: Diagnostics, Therapeutics and Methods for
TITLE OF INVENTION: Detection and Treatment of Acute Leukemias
TITLE OF INVENTION: Resulting from Chromosome Abnormalities in the
TITLE OF INVENTION: All-1 Region
NUMBER OF SEQUENCES: 44
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                .;

US-08-327-392-15/c

US-08-327-392-15/c

Sequence 15, Application US/08327392

Patent No. 5633136

GENERAL INFORMATION:

APPLICANT: Croce, Carlo

TITLE OF INVENTION: ALL-1 Polymucleotides and Monoclonal

TITLE OF INVENTION: Antibodies for Leukemia Detection and

TITLE OF INVENTION: Treatment

TITLE OF INVENTION: Treatment

TITLE OF SEQUENCES: 24

CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 51, Application US/09289466A
Patent No. 6124272
GENERAL INFORMATION:
APPLICANT: DEX M. COWSET
TITLE OF INVENTION: ANTISENSE MODULATION OF PDK-1 EXPRESSION
FILE REFERENCE: RTS-0060
CURRENT APPLICATION NUMBER: US/09/289,466A
CURRENT FILING DATE: 1999-04-09
NUMBER OF SEQ ID NOS: 86

US-08-545-860D-15/c
Sequence 15, Application US/08545860D
Patent No. 6040140
GENERAL INFORMATION:
APPLICANT: Croce, Carlo
APPLICANT: Croce, Carlo
TITLE OF INVENTION: Diagnostics, Therapeutics and Methods
TITLE OF INVENTION: For Detection and Treatment of Acute Leukemias
TITLE OF INVENTION: Resulting from Chromosome Abnormalities in the All-1 Region
WUMBER OF SEQUENCES: 94
                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

Patent No. 6492173
GENERAL INFORMATION:
APPLICANT: Lex M COWSERT
TITLE OF INVENTION: ANTISENSE MODULATION OF CYCLIN D2 EXPRESSION
FILE REFERENCE: RTS-0275
CURRENT APPLICATION NUMBER: US/09/920,760
CURRENT FILING DATE: 2001-08-01
NUMBER OF SEQ ID NOS: 89
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          .

US-09-198-452A-1961
Sequence 1961, Application US/09198452A
Patent No. 6559294
GENERAL INFORMATION:
APPLICANT: Griffals, R.
TITLE OF INVENTION: thereof and uses thereof, in particular for the diagnosis, prever TITLE OF INVENTION: and treatment of infection
TITLE OF INVENTION: and treatment of infection
TITLE OF PREPRENCES: 9710-003-999
TITLE OF UNENTION: and treatment of infection
                                                                                                                                                   VB-09-422-978-10283/c

VB-09-422-978-10283, Application US/09422978

Sequence 10283, Application US/09422978

Patent No. 6537751

GENERAL INFORMATION:

APPLICANT: Cohen, Daniel

APPLICANT: Blumenfeld, Marta

APPLICANT: Chumakov, Ilya

TITLE OF INVENTION: Biallelic markers for use in constructing a high density...

FILE REFERENCE: GENSET 020Cp1

CURRENT APPLICATION NUMBER: US/09/422,978

CURRENT FILING DATE: 1999-10-20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               .

US-09-198452A-4787/c
Sequence 4787, Application US/09198452A
Patent No. 6559294
GENERAL INFORMATION:
APPLICANT: GTIFfais, R.
TITLE OF INVENTION: Chlamydia pneumoniae genomic sequence and polypeptides, fragments
TITLE OF INVENTION: thereof and uses thereof, in particular for the diagnosis, preve
TITLE OF INVENTION: and treatment of infection
TITLE OF INVENTION:
FILE REFERENCE: 9710-003-999
CURRENT APPLICATION NUMBER: US/09/198,452A
CURRENT FILING DATE: 1998-11-24
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ..

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ò
                                                                                                                                                                                                                                                                                                                                                                                      RESULT 148
US-09-657-346A-13/C

i Sequence 13, Application US/09657346A

patent No. 6503754

GENERAL INFORMATION:

APPLICANT: Hong Zhang
APPLICANT: Jacqueline Wyatt

TITLE OF INVENTION: ANTISENSE MODULATION OF BH3 INTERACTING DOMAIN DEATH AGONIST

TITLE OF INVENTION: EXPRESSION
FILE REPERENCE: RTG-0135
CURRENT APPLICATION NUMBER: US/09/657,346A

CURRENT FILING DATE: 2000-09-07
APPLICANT: Blumenfeld, Marta
APPLICANT: Chumakov, Ilya
TITLE OF INVENTION: Biallelic markers for use in constructing a high density...
FILE REFERENCE GENSET.020CP1
CURRENT APPLICATION NUMBER: US/09/422,978
CURRENT FILING DATE: 1999-10-20
                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
